

Anafa Fariyaa

Computer Science Engineering Student | Software Engineering Intern
fariyaa2005@gmail.com | 9384686999 | Chennai, Tamil Nadu

SUMMARY

Computer Science Engineering student at Vellore Institute of Technology with a 9.08/10 CGPA and hands-on experience in software development, computer vision, AI/ML workflows, and full-stack application prototypes. Skilled in Python, Java, C, C++, JavaScript, SQL, data structures, algorithms, object-oriented programming, operating systems, database systems, and computer networks. Experienced in building AI-enabled tools, image detection pipelines, web applications, and real-time computer vision systems, with a strong interest in scalable software engineering and high-performance applications.

SKILLS

Python, Java, C, C++, JavaScript, SQL, Data Structures and Algorithms, Object-Oriented Programming, Software Design, Database Management Systems, Operating Systems, Computer Networks, Computer Architecture, HTML, CSS, Vue.js, Flutter, TensorFlow, Computer Vision, NLP, Deep Learning Fundamentals, Git, GitHub, Kaggle, Google Colab, VS Code, Debugging, Testing

EXPERIENCE

Software Development Intern - 2X Smart Solutions Pvt. Ltd.

May 2026 – June 2026

- Developed and tested an image and video-sharing platform prototype, contributing to feature implementation and quality validation.
- Built a Netflix-inspired streaming application using Vue.js, applying front-end development and component-based design principles.
- Designed and implemented an AI-powered resume tailoring system that customizes resumes based on job descriptions while preserving factual candidate information.
- Supported debugging, testing, deployment preparation, and feature enhancement across software development workflows.

Computer Vision Intern - Defence Research and Development Organisation (DRDO)

May 2025 – June 2025

- Worked on image detection pipelines for Armoured Fighting Vehicle datasets using Python and TensorFlow.
- Used Kaggle datasets to support object detection experimentation, model training, and evaluation.
- Performed preprocessing, training, testing, and results evaluation to improve computer vision workflow reliability.
- Applied machine learning and computer vision fundamentals to real-world defense-related image detection tasks.

PROJECTS

AI-Powered Resume Tailoring System

Built an AI-enabled tool that tailors resumes to job descriptions while preserving factual information, supporting PDF upload and ATS-focused optimization.

Driver Drowsiness Detection System

Developed a real-time fatigue detection system using computer vision and facial landmarks, with a multi-stage alert mechanism for road safety.

Smart Attendance System

Created a Flutter-based QR attendance application with productivity-focused features for streamlined

attendance tracking.

Image Detection in Armoured Fighting Vehicles

Implemented a computer vision project using TensorFlow and Python for image detection workflows on Armoured Fighting Vehicle-related datasets.

Four-Way Traffic Light Controller with Pedestrian Crossing

Designed an FPGA-based traffic management system to control four-way traffic flow and pedestrian crossing signals.

Course Management System

Developed a Java-based course management application demonstrating object-oriented programming principles and structured software design.

EDUCATION

Bachelor of Technology in Computer Science Engineering - Vellore Institute of Technology (VIT), Chennai

Expected Graduation: 2028
