SKILLS

- Python
- Java
- C
- C++
- JavaScript
- SQL
- Data Structures and Algorithms
- Object-Oriented Programming
- Software Design
- Database Management Systems
- Operating Systems
- Computer Networks
- Computer Architecture
- HTML
- CSS
- Vue.js
- Flutter
- TensorFlow
- Computer Vision
- Natural Language Processing
- Deep Learning Fundamentals
- Git
- GitHub
- Kaggle
- Google Colab
- VS Code
- Debugging
- Testing
- Model Training and Evaluation

PROFESSIONAL SUMMARY

Computer Science Engineering undergraduate at Vellore Institute of Technology, Chennai with a 9.08/10 CGPA and hands-on experience in software development, computer vision, AI/ML, and full-stack application prototyping. Skilled in Python, Java, C, C++, JavaScript, SQL, data structures, algorithms, object-oriented programming, operating systems, databases, and computer networks. Experienced in building AI-powered tools, computer vision pipelines, web applications, and Java-based systems, with internship exposure to debugging, testing, deployment preparation, and model evaluation. Strong foundation in core computer science concepts with a demonstrated interest in scalable software systems, AI-integrated applications, and real-world engineering problem solving.

EXPERIENCE

Software Development Intern

2X Smart Solutions Pvt. Ltd. | May 2026 – June 2026

- Developed and tested an image and video-sharing platform prototype, contributing to core feature implementation and application validation.
- Built a Netflix-inspired streaming application using Vue.js, strengthening front-end development and user interface implementation skills.
- Designed and implemented an AI-powered resume tailoring system that customizes resumes based on job descriptions while preserving factual accuracy.
- Supported debugging, testing, deployment preparation, and feature enhancement activities across software prototypes.
- Applied software design, web development, and problem-solving skills to build practical applications aligned with user requirements.

Computer Vision Intern

Defence Research and Development Organisation (DRDO) | May 2025 – June 2025

- Worked on image detection pipelines for Armoured Fighting Vehicle datasets using Python and TensorFlow.
- Used Kaggle datasets to support object detection experimentation, preprocessing, training, testing, and evaluation workflows.
- Performed model experimentation and evaluation to analyze detection performance and improve understanding of computer vision systems.
- Applied machine learning and image processing concepts to real-world defense-oriented visual recognition use cases.

PROJECTS

AI-Powered Resume Tailoring System

Designed an AI-based system that tailors resumes to job descriptions while preserving factual candidate information. Supported PDF upload and ATS-focused optimization.

Driver Drowsiness Detection System

Built a real-time fatigue detection system using computer vision and facial landmarks, with a multi-stage alert mechanism to improve road safety.

Smart Attendance System

Developed a Flutter-based QR attendance application with productivity-focused features for attendance tracking.

Image Detection in Armoured Fighting Vehicles

Created a computer vision project using TensorFlow and Python for image detection workflows involving Armoured Fighting Vehicle datasets.

Four-Way Traffic Light Controller with Pedestrian Crossing

Implemented an FPGA-based traffic management system to simulate four-way traffic control with pedestrian crossing functionality.

Course Management System

Developed a Java-based application demonstrating object-oriented programming principles and structured application design.

EDUCATION

Bachelor of Technology in Computer Science Engineering

Vellore Institute of Technology (VIT), Chennai | Expected Graduation: 2028
